Chevron – Woodside asset swap

MN-20034

Phase 1 Determination

Acquisitions may be put into effect

8 September 2026

1. Determination and statement of reasons

Notified acquisition	By way of four Asset Sale and Purchase Agreements dated 19 December 2024, certain wholly-owned indirect subsidiaries of Chevron Corporation (**Chevron**) and certain wholly-owned direct and indirect subsidiaries of Woodside Energy Group Ltd (**Woodside**) propose to enter into multiple inter-related 'asset swap' transactions, as follows: ▪ Chevron Australia Pty Ltd (**Chevron Australia**) proposes to sell to Woodside Energy (North West Shelf) Pty Ltd its entire interest in various joint ventures comprising the Woodside-operated North West Shelf (**NWS**) Gas Project (its ownership share of such joint ventures ranging from 12.5% to 16.67%) and its 16.67% interest in the Woodside-operated NWS Oil Projects (together, the **NWS Project**); ▪ Chevron Australia New Energies (G-10-AP) Pty Ltd proposes to sell to Woodside NWS its 20% interest in the Woodside-operated proposed Angel Carbon Capture and Storage project (**Angel CCS**); and ▪ Woodside Energy Julimar Pty Ltd proposes to sell to Chevron Australia its 13% interest in the Chevron Australia-operated Wheatstone Project, together with the associated 65% interest in the Woodside-operated Julimar-Brunello fields (the **Julimar Brunello Development**). Chevron Australia will also assume operatorship of the Julimar Brunello Development, together, the **Acquisitions**.
Determination	The Australian Competition and Consumer Commission has determined under section 51ABZE(1) of the C*ompetition and Consumer Act 2010* (Cth) that the Acquisitions may be put into effect.
Parties to the Acquisitions	Chevron is a global energy company headquartered in Texas that explores for, produces and transports crude oil and natural gas; refines, markets and distributes transportation fuels and lubricants; manufactures and sells petrochemicals and additives; generates power; and develops and deploys related technologies. Woodside is a global energy company founded in Australia, with a primary focus on the production of liquefied natural gas (LNG), domestic gas, LPG, oil and condensate. Woodside is also developing a portfolio of new energy products and lower carbon services. Woodside's portfolio includes assets and development opportunities in Australia, the US, Mexico, Senegal, Trinidad and Tobago, Canada and Timor-Leste (among others).
Overlap and relationship between the Parties	In Australia, the Parties overlap in the production and wholesale supply of domestic gas in Western Australia (**WA**). This is natural gas supplied on a wholesale basis to large industrial and commercial customers in WA, including those in the mining, minerals processing and electricity generation sectors. The Parties also overlap in the supply of carbon capture and storage services, meaning the capture, transport, and permanent underground storage of carbon dioxide from industrial emitters.

	The Parties also have shared interests in a number of joint venture operations in WA, including the NWS Project, Angel CCS, the Wheatstone Project, and the Julimar Brunello Development.
Reasons for determination	When making a determination in Phase 1, the Australian Competition and Consumer Commission (**ACCC**) undertakes a competition assessment and considers whether it is appropriate for an acquisition to be approved or subject to further assessment in Phase 2 in accordance with section 51ABZJ of the *Competition and Consumer Act 2010* (Cth) (the **Act**). In doing so, the ACCC must have regard to the object of the Act and all relevant matters, including the interests of consumers. For more information about the ACCC's approach to considering notified acquisitions, see the ACCC's merger assessment guidelines and interim merger process guidelines. In conducting its competition assessment, the ACCC has considered the information and documents that were submitted with the notification form and information from third parties. The ACCC has determined that the Acquisitions may be put into effect as it considers that the Acquisitions are unlikely to have the effect of substantially lessening competition in any market. In reaching its decision, and based on the material before it, the ACCC makes the following findings. • Neither Woodside nor Chevron would gain the ability to unilaterally alter production at the NWS Gas Project, NWS Oil Project, Wheatstone Project, or Julimar-Brunello Development as a result of the Acquisitions. • The Western Australian Dometic Gas Policy requires at least 15% of LNG volumes to be reserved for domestic gas consumers, so the Parties are unlikely to have the ability and incentive to constrict the supply of gas into the domestic market. • While some market participants expressed concerns that reducing the number of equity partners in a production hub may reduce the number of independent WA suppliers of domestic gas, the ACCC considers that the Acquisitions would not substantially change Woodside and/or Chevron's overall gas production entitlements and that there would be no impact on the number of domestic gas suppliers in WA. • Regarding the supply of carbon capture and storage services, there are currently a number of alternative Australian based projects exploring carbon capture and storage opportunities, including projects that are in active development or construction.
Applications for review	A notifying party, or other person who has been allowed to do so by the Australian Competition Tribunal, may apply for review if they are dissatisfied with the determination. Pursuant to section 100C of the Act, applications for review of the determination are to be made to the Australian Competition Tribunal before the end of 14 calendar days after this statement of reasons was included on the ACCC's Acquisitions Register. To confirm whether there has been any application for review, please contact the Australian Competition Tribunal.

Determination made by Commissioner Williams pursuant to a delegation under section 25(1) of the Act
